1. The Title has been changed to read: --Apparatus for Producing Thin-Film Electrolyte--.
2. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Balkanski discloses an apparatus for producing a solid state battery of interest; a machine that produces a solid electrolyte by using a lithium source and a phosphate source is described in the patent to Takeuchi et al. and a system for making a thin-film battery device is shown in the publication to Jenson.

3. The following is an examiner's statement of reasons for allowance: none of the prior art of record teach an apparatus for making a thin film electrolyte layer comprising a substrate holder/substrate and including all of the means-plus-function limitations set forth in both claims 1 and 10. The closest prior art, Takeuchi et al. does not disclose the means for vaporizing both a lithium and a phosphate precursor nor does it disclose means for transporting each of the vaporized materials into created high density plasma.

In addition, by virtue of applicant using means-plus-function language in each of claims 1 and 10, applicant has invoked 35 USC 112, sixth paragraph. This is because applicant has set forth adequate disclosure in the present specification showing what is meant by each of the means-plus-function limitations in each of claims 1 and 10.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue
